

(a) Depth where buried ice is thermally stable

(b) Deviation from the constant- K Fourier limit

Polar $Q_b = 12 \text{ mW m}^{-2}$, $T_{\text{surf}} = 80 \text{ K}$, $T_{\text{stable}} = 110 \text{ K}$ (Schorghofer & Aharonson 2005)

— Hayne $K(T, z)$ integration

● A15 retrieval ($K_d = 4.85$)

● A17 retrieval ($K_d = 11.29$)

— $\eta(K_d)$ from Hayne $K(T, z)$ integration

● Hayne 2017 global ($K_d = 3.4$)
