

Implication for polar-volatile cold-trap depth (polar $Q_b = 12 \text{ mW m}^{-2}$, $T_{\text{surface}} = 80 \text{ K}$)

Reference points (cold-trap stability depth at each K_d)

— Cold-trap depth model

● Hayne 2017 global ($K_d = 3.4$)

● A15 retrieval ($K_d = 4.85$)

● A17 retrieval ($K_d = 11.29$)
